

ABSTRACT OF THE DISCLOSURE

To enable permission or inhibition of printing of data to be controlled, a printability property showing the permission/inhibition of the printing is
5 included in a style attribute of each contents of XML data which is data-broadcasted. By a print instruction, a printability property value of the style attribute of each contents of the received XML data is read out (S6-2). If there is no designation
10 of the printability property and if there is designation of printability = true (S6-2), visualization (rendering) of the contents is executed (S6-5). If printability = false (S6-2), the rendering of the contents is not executed, but a
15 processing of the next contents is executed (S6-3).
